## Question 1

---

**Question Type:** MultipleChoice

---

Elements such as the menu and login can be shared across different apps. In the menu and login are defined inside the theme. Which use case is this?

**Options:**

---

**A-** Portal

**B-** Intranet

**C-** Independent Apps

**Answer:**

---

A

## Question 2

---

**Question Type:** MultipleChoice

---

Which of the below is NOT a reason for Validating a Modules' Architecture?

**Options:**

---

- A-** Optimizes lifecycle independence
- B-** Promotes microservices
- C-** Minimizes impact of changes
- D-** Promotes abstraction of reusable services
- E-** Stop unmanageable dependencies
- F-** Prevent slow deployments, inflexible legacy systems
- G-** Avoid poor service abstraction

**Answer:**

---

B

## Question 3

---

**Question Type:** MultipleChoice

---

"Spaghetti Architecture" is also known as 'tightly coupled architecture' or 'brittle architecture'. Which is NOT a reason why is "Spaghetti Architecture" bad?

**Options:**

---

- A-** One small change in a component cause a series of cascading effects on other components
- B-** Hinder future changes as they become less flexible and difficult to manage
- C-** Any changes is maintainable and easy to deploy

**Answer:**

---

C

## Question 4

---

**Question Type:** MultipleChoice

---

In OutSystems, a Core Application can contain ...

### Options:

---

- A- End-User, Core, and Foundation Modules.
- B- Foundation and Core Modules
- C- Only Foundation Modules.
- D- End-User and Core Modules.

### Answer:

---

B

## Question 5

---

**Question Type:** MultipleChoice

---

Concepts are assembled into Modules in the Assembl are not principles in the Assemble step.

### Options:

---

- A- Don't join concepts with different lifecycles
- B- Apply known design patterns

**C-** N/A

**D-** Join conceptually-related concepts

**E-** Isolate reusable logic from Integration logic

**Answer:**

---

C

## Question 6

---

**Question Type:** MultipleChoice

---

What is done in the Organize part of the Architecture Design Process?

**Options:**

---

**A-** Concepts are disclosed to the Architecture team

**B-** Concepts are assembled into Modules

**C-** Concepts are added to the layers of the Architecture Canvas

**Answer:**

---

C

## Question 7

---

**Question Type:** MultipleChoice

---

\_BL module is for

**Options:**

---

- A-** A BL becomes a Calculation Engine if it performs complex calculations, (e.g. an invoice calculation engine or an insurance simulator). Engines are usually subject to versions.
- B-** Logic to Synchronize data in CS's with an external system. Isolating this logic makes the CS completely system agnostic and it's easier to decouple or replace the external system.
- C-** Isolated Business Logic (Actions), to manage complexity, composition or to have its own lifecycle.
- D-** Reusable Core Services with public entities, actions, and blocks.
- E-** Technical wrapper to expose an API to External consumers, keeping core services system agnostic and supporting multiple versions of the API.

**Answer:**

---

C

## Question 8

---

**Question Type:** MultipleChoice

---

Which of the below is not part of the Architecture Validation

**Options:**

---

- A-** No Downward References To Foundation Modules
- B-** No Side References Between End-User Modules
- C-** No Circular References
- D-** No Upward References

**Answer:**

---

A

## Question 9

---

**Question Type:** MultipleChoice

---

Which of the following Data elements can we find in a Foundation layer Module?

### Options:

---

- A- CRUD actions for Entities
- B- Core Entities (exposed as read-only)
- C- Non-core Entities
- D- Entities to save UI states

### Answer:

---

C
